

380-IVCX and 380-IVCL cables

Cables of the type IVCX and IVCL are UHV compatible vacuum cables, which fit to single sided coaxial feedthroughs. So even with a single sided feedthrough, a connector on the vacuum side with a fitted coaxial cable is possible. Please note, that this combination is not impedance matched.

IVCX For use with:
BNC type 241-BNC-C16, 241-BNC-C40 and multiple BNC feedthroughs of this type on one flange
MHV type 241-MHV-C16, 241-MHV-C40 and multiple MHV feedthroughs of this type on one flange and other feedthroughs with a pin diameter of 2.4mm.

IVCL: For use with :
BNC Floating shield type 241-BNCF-C40 and multiple BNCF feedthroughs of this type on one flange
MHV Floating shield types with non-matched imedane

Please note, that the voltage rating of the IVCX / IVCL cables is 500V DC.
 Used Cable: 50 Ohm Coaxial cable type 311-KAP50

User End: A screw connector with 1.8mm ID is fitted to the inner conductor. The screen is connected to a SS part with 10mm OD . It has a M2 thread for fixation

Standard cable length are 500mm and 1000mm, custom lengths are possible.
 Versions without user end but free cable end are available as well.
